

Long term growth since 1970

Real GDP per person | Each country starts at 100 in 1970 | Through 2024

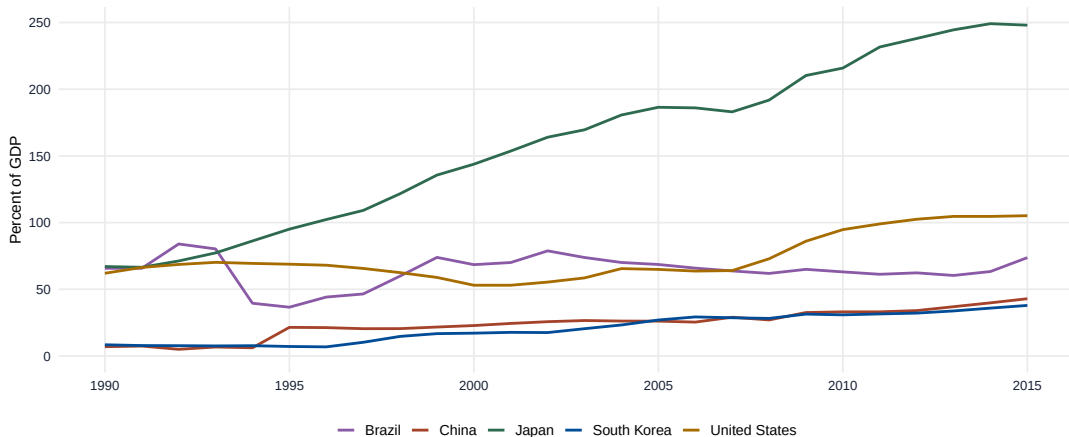

200 means twice the 1970 level. Equal vertical distances represent equal proportional changes.
The index compares growth, not income levels. Based on GDP per person in constant 2015 US dollars.

Historical public debt in five economies

Gross public debt as a percentage of GDP | 1990 to 2015

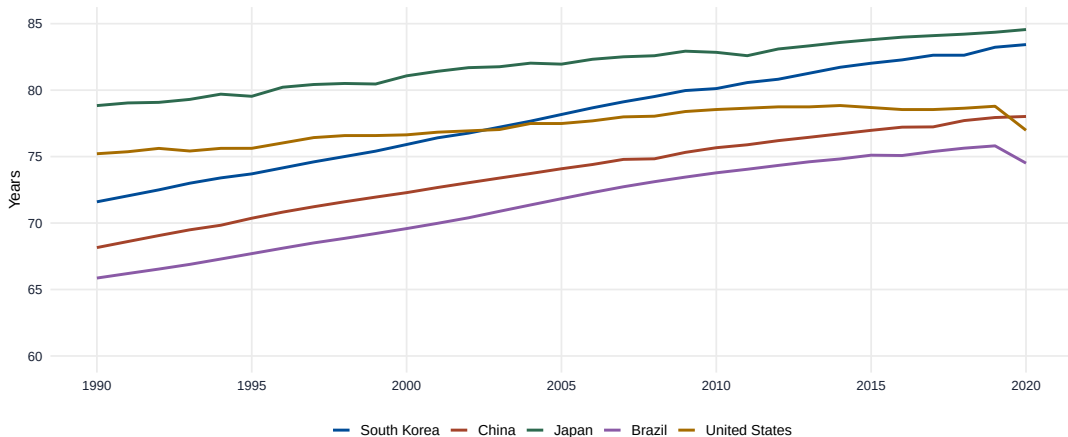

Debt is a stock; GDP is an annual flow. This is not annual borrowing or household debt.
Historical IMF series: government coverage varies across countries and time. Dataset ends in 2015.

Social outcomes: life expectancy at birth

South Korea and selected economies | 1990 to 2020 | Both sexes

Based on mortality rates in each year, not a forecast of how long a particular child will live.
Vertical axis starts at 60 years. Annual series may include estimated or interpolated values.
