

Denmark's Economy and Pharmaceuticals

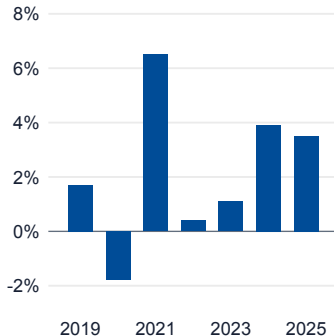

Novo Nordisk shares

Year end price, DKK per B share
Adjusted for the 2023 stock split

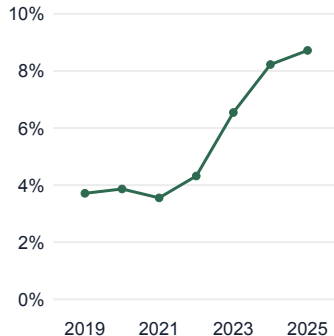

Denmark: real GDP

Annual growth
Change from the previous year

Pharmaceuticals

Industry value added as % of GDP
Both measured at current prices

Source: Novo Nordisk, annual reports 2020, 2021, 2023, 2024, and 2025; Statistics Denmark, NAN1 and NABP69, June 2026 vintage. Annual data, 2019 to 2025. Share prices exclude dividends.

Pharmaceuticals and GDP Growth

Year	Real GDP growth Percent	Pharmaceuticals Percentage points	Other contributions Percentage points
2019	1.7	+0.3	+1.4
2020	-1.8	-0.2	-1.6
2021	6.5	+0.4	+6.1
2022	0.4	+1.5	-1.1
2023	1.1	+2.0	-0.9
2024	3.9	+2.3	+1.6
2025	3.5	+1.1	+2.4

- ▶ Pharmaceuticals offset declines elsewhere in 2022 and 2023. They accounted for about 60% of growth in 2024 and one third in 2025.
- ▶ These are **growth contributions, not GDP shares**. The earlier 1.7% GDP growth and 57% sector growth compared the first halves of 2022 and 2023.

Source: Statistics Denmark, NABP69, NAN1, and June 2026 release. Rounded; 2024 and 2025 provisional. Other contributions include net product taxes. Direct accounting contributions, not total causal effects.

The Pharmaceutical Expansion

- ▶ **The expansion:** Novo Nordisk's Wegovy received U.S. approval in June 2021. Danish pharmaceutical real value added grew 57% in the first half of 2023 from a year earlier.
- ▶ **Other sectors:** factory expansion creates orders for construction and suppliers. Competition for workers can raise other firms' costs.
- ▶ **Patent expiry:** approved generics can lower prices and the original producer's profits while widening access. Other patents and exclusivity can delay entry.
- ▶ **Wider effects:** lower medicine earnings can weaken exports, investment, and tax receipts. Cheaper drugs leave buyers more to spend elsewhere.
