Argentina: Growth and Economic Setbacks

- ▶ **Investment and skills:** Foreign finance supported early growth but weakened after **1914**. Gaps in schooling and industrial capacity also limited productivity.
- ▶ **Trade:** The **1930s Depression** disrupted exports and finance. Later policies favoring domestic industry weakened incentives for agricultural exporters.
- ▶ **Institutions:** Repeated coups from **1930** and changes in economic rules made long-term investment less predictable.
- ▶ **Crisis, 1991–2002:** The dollar peg helped curb inflation. Recession and dollar debts later deepened the crisis: default in **2001**, then the peg ended in **2002**.
